PROJECTS

Arrow Investment (JavaScript / Python / React / Redux / Flask / SQLAlchemy / PostgreSQL / CSS / HTML)

[Live](#) | [GitHub](#)

Arrow Investment is a full-stack website inspired by Robinhood that allows users to trade US stocks live

- Designed front-end and back-end data flow and calculation engine to modularize the application into reduced data fetch requests which optimized website performance and efficiency for a better user experience
- Reduced the cost of external live stock API by 60% and improved the website performance by switching to another API for the front-end, halfway through the project by rewriting related components and fetch requests
- Implemented interactive stock chart with chartJS to provide users with a complete picture of individual stock performance and portfolio performance over time with different time horizons selection

DivvyUp (JavaScript / Python / React / Redux / Flask / SQLAlchemy / PostgreSQL / CSS / HTML)

[Live](#) | [GitHub](#)

DivvyUp is a full-stack website inspired by SplitWise that allows users to track and share expenses and bills with friends

- Collaborated with a team of four engineers and leveraged Git workflow and Agile project management to guide the team's task prioritization to account for teammates' expertise and varied work schedules
- Built full CRUD functions on expense feature with conditional rendering so that users with the proper role can perform specific actions to accomplish the tracking of accurate expenses amongst all parties
- Modernized web and mobile UI/UX design from the original website to enhance users' experience with straightforward navigation, and logical placement of buttons using CSS flexbox, z-index, and pseudo-classes

HomeSweetHomeAway (JavaScript / React / Redux / Express / Sequelize / PostgreSQL / CSS / HTML)

[Live](#) | [GitHub](#)

HomeSweetHomeAway is a full-stack website inspired by Airbnb that allows users to book vacation homes all over the world

- Spearheaded the design and implementation of the database schema, RESTful web API routes, and back-end queries, optimizing workflow between front and back-end
- Incorporated Amazon S3's data storage infrastructure to upload and retrieve files, benefiting from its data scalability and capacity, resulting in improved page-load performance
- Modularized front-end components to improve code efficiency by reusing the same component for multiple pages

SKILLS AND TECHNOLOGIES

Javascript, Python, React, Redux, Node.js, SQL, SQLAlchemy, Tailwind, AWS S3, Docker, Git, chartJS, Mocha, Chai, test-driven development (TDD), agile project management, debugging, deployment, cross-functional collaboration, data structure and algorithm
